

Module 5

Incident Coordination

[Presenter Name]
[Date]

Training Module 5, Incident Coordination, Version 1, ©2016 FIRST

Agenda

By the end of this module, you will be able to:

- Identify methods for handling major security events
- Describe how to coordinate responses with other CSIRTs
- Define an incident coordination process
- Explain processes for working with vendors
- Clarify how to work with law enforcement
- Identify methods for working with organizations at various levels of influence
- Practice incident coordination steps

Section 1:

Major Security Events

Training Module 5, Incident Coordination, Version 1, ©2016 FIRST

What Is A Major Security Event?

A major security event is any security threat that affects the organization in a way that can cause:

- Significant loss of business
- Financial damage
- Injury to reputation/branding

Training Module 5, Incident Coordination, Version 1, ©2016 FIRST

Types of Major Security Events

Types of major security events include:

- Data breaches
- Website defacement
- Denial of service attacks (DOS, DDOS)
- Target attacks and APTs
- Malware incidents
- Phishing incidents

Training Module 5, Incident Coordination, Version 1, ©2016 FIRST

Types of Major Security Events:
Data Breach and Website Defacement

Types of major security events:

- Data breach – sensitive or proprietary data is released to unauthorized people or organizations
- Website defacement – when a web page or set of pages is modified, rendering it unusable or redirecting it to a malicious site

Training Module 5, Incident Coordination, Version 1, ©2016 FIRST

Types of Major Security Events:
DoS/DDoS, Target Attacks, and APTs

Types of major security events:

- Denial of service (DoS, DDoS) attacks – when a website is made unavailable by bogus traffic overloading the system
- Target attacks and advanced persistent threats (APTs) – a network attack in which an unauthorized person gains access to a network

Training Module 5, Incident Coordination, Version 1, ©2016 FIRST

Types of Major Security Events:
Malware and Phishing Incidents

Types of major security events:

- Malware incidents – when any software is used to disrupt computer operation, gather sensitive information, or gain access to private computer systems
- Phishing incidents – attempts to acquire sensitive information such as usernames, passwords, and credit card details

Training Module 5, Incident Coordination, Version 1, ©2016 FIRST

Learning Check

How would you rank the negative impacts of the security events we just discussed?

**Section 2:
Incident Management and CSIRTs**

Training Module 5, Incident Coordination, Version 1, ©2016 FIRST

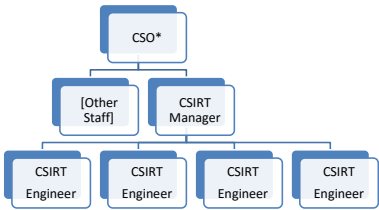

Coordinating Responses with CSIRTs

- A CSIRT will vary in size and structure
- Each CSIRT will have a general chain of command where incidents escalate, depending on severity
- PSIRTs may be part of your workflow if your organization releases products
- Make sure you take the time to familiarize yourself with the structure of the CSIRT in your organization

Training Module 5, Incident Coordination, Version 1, ©2016 FIRST

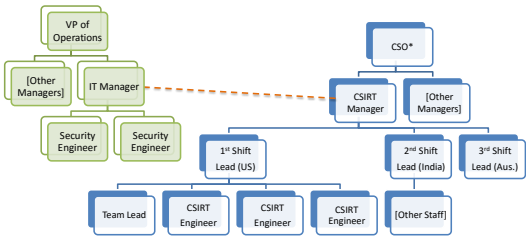

CSIRT Structure: Simple Example

* Organization's Chief Security Officer

Training Module 5, Incident Coordination, Version 1, ©2016 FIRST

CSIRT Structure: 24x7 Example

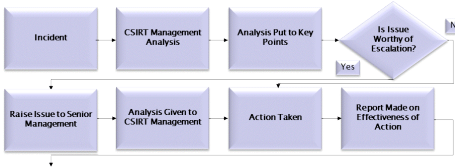

* Organization's Chief Security Officer

Training Module 5, Incident Coordination, Version 1, ©2016 FIRST

Flow of Information within CSIRT

- The way in which information flows within the CSIRT varies from organization to organization

Training Module 5, Incident Coordination, Version 1, ©2016 FIRST

CSIRTs Working in Shifts

When one member of a CSIRT is working on an incident and a shift change occurs, one of two things must happen:

- 1. The CSIRT member hands off the incident duties to the corresponding CSIRT member on the next shift
- 2. The CSIRT stays on in an overtime capacity to finish handling the incident

Note: At no point should any major incident be left without a handler

Training Module 5, Incident Coordination, Version 1, © 2016 FIRST

Learning Check

How does the exchange of information during CSIRT shifts work in your organization?

Section 3:
Incident Response Processes

Training Module 5, Incident Coordination, Version 1, © 2016 FIRST

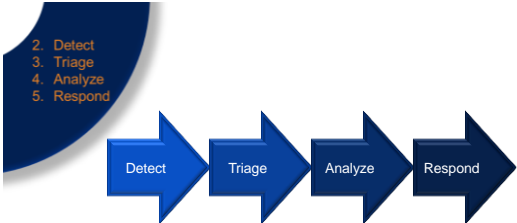

Incident Management Processes

Training Module 5, Incident Coordination, Version 1, © 2016 FIRST

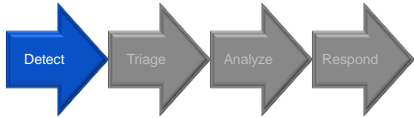

Incident Response Process

There are four phases to every incident response plan:

Training Module 5, Incident Coordination, Version 1, © 2016 FIRST

Phase 1 – Detect

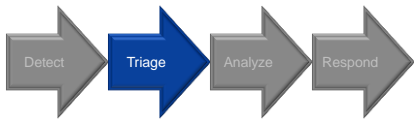

The CSIRT must first gather evidence to determine:

- Whether there is an incident
- What type of incident
- Details about the incident

Training Module 5, Incident Coordination, Version 1, ©2016 FIRST

Phase 2 – Triage

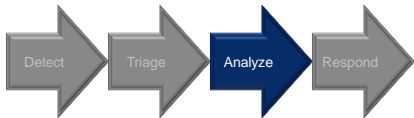

The CSIRT must limit the damage to the organization and follow certain steps to make sure the incident is contained:

- Short-term containment: limiting the damage as quickly as possible
- Forensic evidence collection: backing up the affected systems and preserving forensic evidence in the event of a criminal act
- Long-term containment: temporarily replacing the systems so normal production can resume

Training Module 5, Incident Coordination, Version 1, ©2016 FIRST

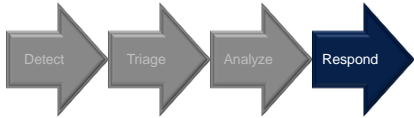

Phase 3 – Analyze

The CSIRT must assess the severity and determine the urgency, identifying the possible causes of the attack

Training Module 5, Incident Coordination, Version 1, ©2016 FIRST

Phase 4 – Respond

- The CSIRT must:
- Remove all dangers from the affected systems
 - Restore all systems to a permanent operable state
 - Bring affected systems back into production carefully
 - Test and monitor systems until confidence is restored
 - Document the incident and its resolution for future use

Training Module 5, Incident Coordination, Version 1, ©2016 FIRST

Working with Outside Entities

- A CSIRT needs to cooperate and coordinate with:
- Vendors
 - Law enforcement
 - Other agencies or organizations

Training Module 5, Incident Coordination, Version 1, ©2016 FIRST

Working with Vendors

- Vendors are groups that provide products, mainly hardware or software
- If there is a problem with a vendor’s hardware or software, go to the vendor’s website to look for a fix
- If a fix is not publicized, contact the vendor
- Often the first point of contact is through that vendor’s PSIRT

Training Module 5, Incident Coordination, Version 1, ©2016 FIRST

Working with Law Enforcement

- A CSIRT should contact law enforcement when a crime has been committed
- There are times when law enforcement might reach out to a CSIRT to gather information on a case or offer professional counsel
- The CSIRT might work with state and federal entities, such as the FBI or Interpol
- Organizations have their own processes

Training Module 5, Incident Coordination, Version 1, ©2016 FIRST

Working with Agencies and Organizations

Other agencies and organizations you may work with:

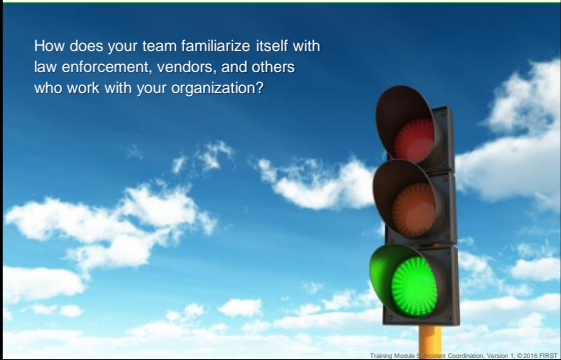

- FIRST
- NERC
- OAS
- ENISA

Training Module 5, Incident Coordination, Version 1, ©2016 FIRST

Learning Check

How does your team familiarize itself with law enforcement, vendors, and others who work with your organization?
